Features & Benefits

CONSTRUCTION

Sectional: Made of 9" high sections with a reversible bottom and a spring-hinged top. The case is stainless steel wrapped around 2-1/2" or 3" of K23 highly insulating firebrick with 3 adjusting screw clamps per section. Easy to move: hotkilns.com/assemble-easy-fire

Brushed stainless steel spring hinge (on 23" & 28" diameter models) makes opening easy while still allowing lid to be supported and providing an unobstructed opening for easy loading. Safety pin prevents lid from closing while loading.

Firebrick is coated with a proprietary anti-dusting, hardening, and reflective coating.

Ceramic element terminals make element changes easy using a wrench.

A heavy 14 gauge full support solid stand with multiple bends for strength. Includes molded plastic feet protectors.

Full-view solid ceramic peephole plugs are 1" diameter non-tapered with heat-locked head. There is one for each section.

ELEMENT HOLDER SYSTEM

Patented hard ceramic element holders protect brick and elements from wear and loading damage. All-ceramic element connection block and hard holders makes changing elements easy.

DYNATROL ZONE CONTROL

DynaTrol with 4 Easy-Fire programs (Slow Bisque, Fast Bisque, Slow Glaze, Fast Glaze), 6 Vary-Fire custom programs, PreHeat, Delay, Program & Segment Review, and Diagnostics. Zone control with 2 or 3 zones. Separate Type K 8 gauge thermocouples with ceramic protection tubes. Genesis touch screen control optional (see page 27).

PIGGY-BACKED COOL-FIRE CONTROL PANEL

All controls and components are in a separate angled control panel that is piggy-backed on top of the element connection box. Both boxes are hinged and open and remove easily. A layer of insulation plus the separate control box keep the controls and relays cool. Power wires are oversized to run cool. On/off switch and control fuse included.

If planning continuous Cone 6 firings on a 10 cubic foot single phase kiln we recommend the eQuad-Pro eQ2827-3 (page 7) or the Jupiter JD2927-3 (page 8) (both have more KW than the e28T-3 in their single phase versions).

Plugs on US Models only: 6-50 on single phase and 15-50 on three phase.

UL Listing: c-MET-us listed to UL499 standards. **CE Listing:** CE Listed models are available.

SCHOOL-MASTER KILNS ARE WARRANTED FOR FIVE YEARS!

School-Master Kilns are super-durable and include all of the easy-maintenance features of the Easy-Fire kilns. For simplicity, however, School-Master kilns feature the intuitive One-Touch™ kiln control that has a standard Bisque and Glaze program tuned to the needs of most K-12 programs. Temperature, heating and cooling rate, delay time and soak time can all be easily modified for the two main programs and remain set that way until deliberately changed. In addition, for more advanced users, there are four custom programs. The control is single zone and the kilns have graded elements. Because there are only two sizes the element resistance is well-tuned for good performance. The School-Master kilns are limited to Cone 6 operation even though the construction of the kilns can handle higher temperatures.

CERAMIC FIBER LIDS

The lid firebrick is replaced with ceramic fiber modules mounted to a metal welded frame. 2600°F ceramic fiber is folded and formed into 4" thick modules that have an alloy support system inside. The internal support of the module is stud-welded to a metal frame that matches the

normal metal frame that we use in the firebrick lid. These lids will never crack or spall. The ceramic fiber is rated in temperature higher than the kiln rating so there is no concern about shrinkage of the fiber.

These fiber lids are available as either new equipment or as retrofit kits to fit older kilns. hotkilns.com/fiber-lid

DAVINCI BELL-LIFT KILNS

Features & Benefits

Availability: DaVinci X3200-D & T3400-D Kiln Series. Also a special version exists for much larger kilns (TB644754-D).

Application: A common complaint concerning top loading kilns, the larger ones in particular, is that it is difficult to load them. This is especially true for larger pieces, and in a production environment this labor intensive job can become very expensive over time. Moreover, some people simply aren't capable of doing this strenuous and heavy lifting. Front loading kilns are often desired because they seem to be easier to load, however, it is still a strain to put a heavy piece into the back of a front-loading kiln and these kilns are generally more expensive and difficult to move. Shuttle kilns or envelope kilns work well for loading but they are also very expensive. Bell-lift kilns are one good solution for this problem.

How it Works: The Bell-Lift accessory lifts the whole kiln up as a unit exposing the bottom of the kiln for loading from all four sides. The kiln sections and top are held together as one unit with a metal support frame. This unit is lifted up with a ratcheted hand winch mounted on the external frame. (Electric winches are available as an upgrade.) There are manual safety pins that lock the kiln in place when the kiln is fully raised.

Construction: This whole support frame is made from powder-coated heavy duty welded parts that are easily assembled on site so that the system can be easily broken down for inexpensive common carrier shipping. (It is a two to three person job to assemble the kiln. Only simple tools, like wrenches are required).

Dimensions

Height: A 18", 27" or 36" high kiln (interior) will be 105" high, and a 45" high kiln will be 123" high.

Sections of
Almost Any Size

Custom polygonal kilns with 4-1/2" of firebrick are available by special quote. L&L can make almost any diameter and any height in multiples of 9" high sections. There are three elements per 9" high section. The base is made of welded angle-iron with leveling bolts. The bottom is typically 4-1/2" of K23 brick. These are typically cemented in sections and then held together with a stainless steel band. The top is typically made of 4" thick folded and formed ceramic fiber modules. Temperatures are limited to 2350°F (1285°C).

SIGNATURE L&L FEATURES

HARD CERAMIC ELEMENT HOLDERS - KEY TO L&L'S DURABILITY

The smooth, hard surface of the inside ceramic channel allows the elements to expand and contract freely. No pins! This prevents catastrophic element failure. Elements do not droop out of broken firebrick channels. The dense ceramic DynaGlow holders extend element life because they do not insulate the hot elements from the kiln interior.

OTHER DURABILITY FEATURES

PROTECTED THERMOCOUPLES

L&L thermocouples are shielded from corrosion by a ceramic protection tube. We use the finest "special limit" aerospace-grade heavy-gauge thermocouple wire. The protection tube prevents black dust from the thermocouple end from discolouring your work. (hotkilns.com/tc-protection)

CERAMIC ELEMENT TERMINALS

Ceramic element terminals make element changes easy. (hotkilns.com/ceramic-terminal)

SOLID PEEP PLUGS

Solid straight ceramic peephole plugs are strong and will not slip out like tapered, fragile, slip-cast plugs. (hotkilns.com/peephole-plugs)

CORROSION RESISTANCE

Stainless steel, aluminized, and galvanealed steel are used where needed. All other metal is powder-coated which also resists corrosion. (hotkilns.com/corrosion-resistant)

PROPRIETARY BRICK COATING

L&L's proprietary reflective brick coating protects the surface of the firebrick and keeps dusting down inside the kiln. (hotkilns.com/reflective-coating)

LID BRICK IS SECURED WITH CLIPS

Stainless "U" brackets secure lids - not friction. (hotkilns.com/lid-clips)

FULL-SUPPORT STANDS

On all polygonal kilns we use a Full-support 14 gauge aluminized steel stand is stronger than hollow frame stands and provides important support in the center of the bottom. (hotkilns.com/full-stand)

PERFORMANCE

DYNATROL IS EASY AND POWERFUL

DynaTrol with 4 Easy-Fire programs (Slow Bisque, Fast Bisque, Slow Glaze, Fast Glaze), 6 custom programs, PreHeat, Delay, Program, Segment Review, and Diagnostics. (hotkilns.com/dynatrol) Also see optional controls on page 27.

DYNAMIC ZONE CONTROL

The DynaTrol separately measures temperatures in the bottom, middle and top of the kiln and automatically adjusts the heat output of three zones during the entire firing. Kiln temperatures are automatically evened out to within 1/2 cone or better top to bottom. Zone control automatically compensates for many loading issues and element changes over time. Even on kilns where we use graded elements, L&L kilns are fundamentally uniform because the element holders radiate the heat more evenly. (hotkilns.com/zone)

"EASY-OPEN, EASY-LOAD" LID OPENS WIDE FOR LOADING

The whole kiln supports the lid (not just one section). Our positive safety pin secures the lid safely. No support bars (like other kilns) get in the way of loading when the lid is fully tilted back. (hotkilns.com/spring-hinge)

SAFETY

UL499 LISTING

Most L&L kilns are c-MET-us listed to UL499 standards. See each kiln series for details. (hotkilns.com/ul499)

SAFE MATERIALS

No asbestos, mercury, lead, or other hazardous materials are used in L&L kilns.

SAFETY LATCHES ON LIDS

All lids and lifting devices include a safety latching system. On/Off & safety switches.

MAINTAINABILITY

L&L KILNS ARE EASY TO TROUBLESHOOT

Open up any L&L kiln control panel and see how easy it is to check amps, element resistance, and voltage. No other kiln can be serviced as quickly, easily, or inexpensively as an L&L kiln.

SECTIONAL CONSTRUCTION MAKES REPAIR WORK EASY

All top-loading L&L kilns are sectional. Even the large 35 cubic foot standard DaVinci kiln is easy to move, set up, and repair.

WHAT L&L CUSTOMERS SAY

BILL CAMPBELL

"I make a living out of my five L&L kilns. I really beat them up, firing them at least three times a week to Cone 10. They take a real beating and keep on going."

DIANE EMERSON

"I switched to L&L because of the deterioration of the element channels in my last kiln. I load larger tiles and I need the extra durability on the face of the firebrick."

FRANK GIORGINI

"My original L&L (J2927) has provided outstanding service and reliability through the firing of countless pots, tiles, udu drums, sculptures and two New York City MTA Subway projects. It's still in service right next to my DaVinci kiln."
